Technical solutions used:

Side gears

Bevel gears and power take-off couplings reduce gear maintenance and make the gear more reliable than a chain drive.

Removable stalk shredders

Each shredder is equipped with large-diameter steel discs with knives with tungsten carbide blades, mounted in a central rear position and connected

directly to the harvesting drive gearbox. The shredders can be removed with plier or a screwdriver.

Chain tension adjustment

The tension of the harvesting chain is controlled by a strong, simple screw system that ensures reliability in all working conditions.

Adjustable knives

Four hinged, adjustable steel knives have tungsten carbide edges. They are securely bolted on for easy maintenance.

Collecting rollers

The rollers are supported at the front and equipped with helical stalk rollers for smooth and even stalk collection. The scraper blade prevents grass from wrapping around the roller.
